

BIOGAS WELLHEADS AND COLLECTORS

Vertical and horizontal pipes are used for extract the biogas. Biogas is collected from landfills by these pipe networks and transferred to the booster units. HDPE slotted pipes are used for this purpose. Wellheads are used to connect the wells to the biogas collection network. The collector is used to convex many secondary lines to one primary line which can be designed in different structures. It helps the operator for regulation and control of wells from one single point from the valve of each line. convex designs and provides slotted pipes, wellheads and collectors.

convex is the sole agent of Conveco S.r.l. in Turkey.
